

MYSQL MOCKTEST

1. Retrieve Movie Details

The screenshot shows a database client interface with a sidebar on the left containing a tree view of database objects (Screen, Seat, Show, ShowSeat, sqlite_sequence, Ticket, User) and a list of databases (SQLite, DuckDB, PGlite, Demo Server, MariaDB, PostgreSQL). The main area displays a query: `1 SELECT * FROM Movie;` and its results in a table with 12 rows. The columns are: movie_id, title, genre, rating, status, and poster_image_url. The results list movies like Avatar, Nine, Hard Luck, The Officers' Ward, You Are So Beautiful, It's Complicated, Sherlock Holmes, Crazy Heart, The Art of War II: B., The Last Station, Too Shy to Try, and Alvin and the Chipmunks.

movie_id	title	genre	rating	status	poster_image_url
1	Avatar	Sci-Fi	5.1	Coming Soon	https://placekitten.com/400/400
2	Nine	Comedy	7.5	Now Showing	https://placekitten.com/800/800
3	Hard Luck	Horror	1.4	Now Showing	https://dummyimage.com/400x400
4	The Officers' Ward	Comedy	1.7	Coming Soon	https://dummyimage.com/400x400
5	You Are So Beautiful	Horror	5.9	Coming Soon	https://dummyimage.com/400x400
6	It's Complicated	Horror	9	Now Showing	https://picsum.photos/800/800
7	Sherlock Holmes	Drama	2.8	Coming Soon	https://placekitten.com/400/400
8	Crazy Heart	Action	4.2	Now Showing	https://picsum.photos/200/200
9	The Art of War II: B.	Horror	8.2	Now Showing	https://placekitten.com/900/900
10	The Last Station	Drama	5.8	Coming Soon	https://dummyimage.com/400x400
11	Too Shy to Try	Action	2.8	Now Showing	https://dummyimage.com/400x400
12	Alvin and the Chipmunks	Action	6.7	Coming Soon	https://picsum.photos/500/500

2. Display Screen Information with Aliases

The screenshot shows the same database client interface. The query is: `1 SELECT screen_id AS Screenno, name AS Screen_Name, capacity AS Seating_Capacity FROM Screen;` The results table has columns: screen_id, name, class_type, and capacity. The results show screen information for the movie 'Avatar'.

screen_id	name	class_type	capacity
1	A	Gold	150

3. Filter Premium Screen Shows

The screenshot shows the same database client interface. The query is: `1 SELECT * FROM Screen WHERE class_type = 'Gold';` The results table has columns: screen_id, name, class_type, and capacity. The results show screen information for the movie 'Avatar'.

screen_id	name	class_type	capacity
1	A	Gold	150

4. Identify Users by Email Domain

The screenshot shows a database application interface with a sidebar on the left containing a tree view of database objects (Screen, Seat, Show, ShowSeat, sqlite_sequence, Ticket, User) and a 'Column' section. The main area displays a SQL query: `1 SELECT * FROM User; 2 WHERE email LIKE '@gmail.com'; 3 4 SELECT * FROM User;`. Below the query is a table with 12 rows of user data. The right sidebar shows a 'History' panel with a list of executed queries and their timestamps.

user_id	name	email	phone
1	Zachary Adams	hbowen@yahoo.com	7305907214
2	Shane Thomas	qwatkins@icloud.com	9879430961
3	Alexa Zhang	cndyrodriquez@gmail.com	5964058183
4	Hayden Perez	zbailey@outlook.com	2377986920
5	Todd Fleming	boydpatrick@hotmail.com	1543513028
6	Mitchell Gay	ericsummers@icloud.com	3758700728
7	Lori Robinson	david01@hotmail.com	4377597119
8	Joseph Cook	flu@hotmail.com	9123425625
9	Paul Baxter	amarlin@protonmail.com	8311999369
10	Margaret Perez	xnorton@protonmail.com	8936221793
11	Dominique Lee MD	sotoandrew@aol.com	6730511127
12	David Mcneil	wrobinson@icloud.com	2102670909

5. Find Upcoming Shows for a Specific Genre

The screenshot shows a database application interface with a sidebar on the left containing a tree view of database objects (MovieCast, Payment, PaymentGateway, PointsTransaction, Review, Screen, Seat, Show) and a 'Column' section. The main area displays a SQL query: `1 SELECT * FROM Movie; 2 SELECT movie_id, title, rating 3 FROM Movie 4 WHERE (genre = 'Action' OR genre = 'Thriller') 5 AND status != 'Now Showing'; 6 7`. Below the query is a table with 12 rows of movie data. The right sidebar shows a 'History' panel with a list of executed queries and their timestamps.

movie_id	title	rating
12	Alvin and the Chipmunks: The Squeakquel	6.7
28	Sweepers	2
32	Variety	3.1
46	Aaja Nachle	9.2
48	Rocker	4
51	Flame of My Love	9
60	Agent Red	5.1
66	Land of the Pharaohs	2.2
107	Ernest Goes to School	3.6
133	The Devil, Probably	2.6
154	The Story of a Cheat	7.2

6. Shows Scheduled Within a Date Range

The screenshot shows a database application interface with a sidebar on the left containing a tree view of database objects (MovieCast, Payment, PaymentGateway, PointsTransaction, Review, Screen, Seat, Show) and a 'Column' section. The main area displays a SQL query: `1 SELECT * FROM SHOW; 2 3 SELECT * FROM SHOW 4 WHERE show_datetime BETWEEN '20-10-2025' AND '20-10-2025';`. Below the query is a table with 18 rows of show data. The right sidebar shows a 'History' panel with a list of executed queries and their timestamps.

show_id	screen_id	movie_id	show_datetime
2	3	415	20-03-2025 05:48
8	2	230	18-01-2025 21:09
9	2	28	12-01-2025 11:27
13	2	318	15-03-2025 05:40
14	2	434	15-01-2025 12:40
19	1	482	14-02-2025 16:40
22	3	324	20-03-2025 04:10
25	3	4	19-01-2025 19:22
32	3	62	17-03-2025 15:36
33	1	11	16-03-2025 06:47
35	4	180	15-03-2025 11:45
38	2	390	20-02-2025 07:13

7. List Top Movies by Rating

The screenshot shows a database client interface with a sidebar on the left containing a tree view of database objects. The main editor displays a SQL query to select the top 3 movies by rating. The query is as follows:

```
3 rating
4 FROM
5 Movie
6 ORDER BY
7 rating DESC
8 LIMIT 3;
```

The results table shows the following data:

title	rating
Marriage Italian Style	10
The Secret of Santa Vittoria	10
ZMD: Zombies of Mass Destruction	10

The History panel on the right shows the executed query and a message indicating that the hint limit has been reached.

8. Count Bookings per Show

The screenshot shows a database client interface with a sidebar on the left containing a tree view of database objects. The main editor displays a SQL query to count the total bookings for each show. The query is as follows:

```
1 SELECT * FROM Booking;
2
3 SELECT
4 show_id,
5 COUNT(*) AS total_bookings
6 FROM
7 booking
8 GROUP BY
9 show_id;
```

The results table shows the following data:

booking_id	user_id	show_id	booking_datetime	total_cost
1	1	14	2025-03-09 22:01:57	465.47
2	2	3	2025-02-27 16:32:11	709.3
3	2	2	2025-02-23 19:56:20	803.27
4	2	4	2025-02-23 07:18:51	910.37
5	3	3	2025-02-22 19:37:49	418.74
6	3	3	2025-03-05 02:14:50	794.77
7	4	4	2025-03-02 22:46:30	269.78
8	4	16	2025-03-05 11:12:58	130.5
9	4	3	2025-03-02 14:05:41	400.39
10	4	10	2025-03-08 21:09:29	115.61

The History panel on the right shows the executed query and a message indicating that the hint limit has been reached.

9. Find Unique Movie Genres

The screenshot shows a database client interface with a sidebar on the left containing a tree view of database objects. The main editor displays a SQL query to find unique movie genres. The query is as follows:

```
1 SELECT DISTINCT genre
2 FROM Movie;
```

The results table shows the following data:

genre
Sci-Fi
Comedy
Horror
Drama
Action

The History panel on the right shows the executed query and a message indicating that the hint limit has been reached.

10. Display Recently Added Bookings

The screenshot shows a database management tool interface. On the left, a sidebar lists database objects: FoodItem, FoodItemSize, FoodOrder, FoodOrderItem, Membership, and Movie. The 'Movie' object is selected, showing a list of columns: movie_id (INTEGER), title (VARCHAR(255)), genre (VARCHAR(50)), rating (DECIMAL(3,1)), status (VARCHAR(20)), poster_image_url (VARCHAR(255)), MovieCast, Payment, PaymentGateway, PointsTransaction, Review, Screen, Seat, Show, ShowSeat, sqtile_sequence, Ticket, and User.

The main area displays a SQL query:

```
1 SELECT *
2 FROM Booking
3 ORDER BY booking_datetime DESC
4 LIMIT 5 OFFSET 0;
5 SELECT * FROM Booking;
```

The query results are shown in a table with the following columns: booking_id, user_id, show_id, booking_datetime, and total_cost. The data is as follows:

booking_id	user_id	show_id	booking_datetime	total_cost
14947	2480	4	2025-10-11 08:54:00	500.42
3729	1264	14	2025-03-12 12:20:51	419.39
2229	770	11	2025-03-12 12:11:41	844.72
7995	2677	15	2025-03-12 12:11:27	715.22
6761	2289	6	2025-03-12 12:08:55	888.76

On the right, the 'History' tab shows a list of previous queries and their execution times.

11. Calculate Revenue per Booking

The screenshot shows the same database management tool interface. The 'Movie' object is still selected in the sidebar.

The main area displays a SQL query:

```
1 SELECT
2   booking_id,
3   total_cost,
4   total_cost * 1.18 AS total_with_gst
5 FROM
6   Booking;
7
```

The query results are shown in a table with the following columns: booking_id, total_cost, and total_with_gst. The data is as follows:

booking_id	total_cost	total_with_gst
1	465.47	549.2546
2	789.3	931.374
3	803.27	947.8559999999999
4	918.37	1074.2366
5	418.74	494.1132
6	794.77	937.8285999999999
7	269.78	318.34039999999993
8	138.5	153.80999999999998
9	408.39	472.4682
10	115.61	136.41979999999998
11	185.96	218.3708

On the right, the 'History' tab shows a list of previous queries and their execution times.

12. Categorize Movies by Rating

The screenshot shows the same database management tool interface. The 'Movie' object is still selected in the sidebar.

The main area displays a SQL query:

```
1 SELECT title, genre,
2        CASE
3          WHEN rating >= 9.0 THEN 'Blockbuster'
4          WHEN rating BETWEEN 7.5 AND 8.9 THEN 'Hit'
5          WHEN rating < 7.5 THEN 'Average'
6        END AS rating
7 FROM Movie;
```

The query results are shown in a table with the following columns: title, genre, and rating. The data is as follows:

title	genre	rating
Avatar	Sci-Fi	Average
Nine	Comedy	Hit
Hard Luck	Horror	Average
The Officers' Ward	Comedy	Average
You Are So Beautiful	Horror	Average
It's Complicated	Horror	Blockbuster
Sherlock Holmes	Drama	Average
Crazy Heart	Action	Average
The Art of War II: Betrayal	Horror	Hit
The Last Station	Drama	Average

On the right, the 'History' tab shows a list of previous queries and their execution times.
